

GM0-Free Declaration

1. Policy

Hops and hop products are not derived from or produced using genetically modified organisms (GMOs) or their derivatives, and all reasonable steps have been taken to avoid contamination from GMOs or their derivatives. This has been verified by using the control measures outlined below.

2. Production Techniques

All hop breeding, in both the public and private sectors, is carried out by conventional methods, without the use of gene splicing/recombinant DNA technology. All current hop varieties, as well as varieties under development, contain only genetic material that is native to *Humulus lupulus*.

3. Types of raw materials and processing aids used

All Crosby Hops hop products contain only plant matter from *Humulus lupulus*, with only the use of food-grade nitrogen as the sole processing aid, and thus do not contain GMOs or their derivatives.

4. Traceability/identity preservation systems

All Crosby Hops hop products are tracked by variety and lot number and closely monitored through quality control checkpoints in the traceability database throughout harvest, drying, baling, storage, transportation, and production, thus eliminating the possibility of contamination with GMOs or their derivatives.

Therefore, we certify that all hops and hop products delivered to customers are GMO-free and conform to all applicable food safety regulations.
